Bench Mark: 410
Northeast corner of 14th Street and Chestnut Ave. Lead and tack. Elevation 862.81.

LOCATION SKETCH

Note: Location of Boring Logs are noted thus: B-42 or C10 ⊕.
Elevation shown at top of Boring is top of ground.
Elevation shown at bottom of Boring is top of Limestone.

BORING LOGS

Notes:
Pile spacings and Footing dimensions for Column Footings are typical.
Piles in Bents 1 and 3 are 12 BP 53 battered 3" per foot where shown.
Piles in Bent 2 are 14 BP 73 battered 3" per foot where shown.

GENERAL NOTES

Design Specifications: AASHO 1957.

Design Loading: H20 - 15 #/sq. ft. future wearing surface.

Concrete: Concrete Stress: Class "B-1" fc = 1400 psi
Class "B" fc = 1200 psi
Concrete for superstructure shall be Class "B-1" air entrained. Concrete for substructure shall be Class "B" air entrained. If the contractor desires, he may use Class "B-1" in lieu of Class "B" for concrete in substructure with payment made on the basis of Class "B" concrete.
All forms are to be removed from the interior of box girders, except as indicated in Special Provisions for top slab.

Reinforcing Steel: Allowable Stress 20,000 psi. All splices in reinforcing steel shall be 32 bar diameters.
Bar sizes are designated on the plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicate the size of the bar.
Dimensions shown on the plans from reinforcing steel to outside edge of concrete are all clear dimensions.
All bending dimensions are from "out to out" of bars.

Utilities: All utilities, unless shown otherwise, shall be removed or relocated by others. The contractor will notify the owner of the utilities of his work schedule sufficiently in advance to allow time for the disposition of utilities.

Shipping: Permits must be obtained for all truck loads over legal length.

Joint Filler: Where joint filler is specified on the plans it shall conform with the requirements for gray rubber compound joints as given in Section 59-22B of the Standard Specifications.

Fiber Conduit: Expansion sleeves shall be required in fiber conduit at all expansion joints. Expansion sleeve shall be an oversized fiber conduit with rubber ring as provided by the manufacturer.

Piling: All piles shall conform with details and notes on Sheet No. 7.
All piles required for this structure will be furnished by the State. (See Special Provisions). All piles shall be driven to or into solid rock, boulders, shale or cemented gravel, or to not less than full length authorized, and to sustain a load of at least 64 tons per pile for 14 BP 73 and 46 tons per pile for 12BP53. All piles shall be driven with a steam hammer. See Section 22-9C of Standard Specifications for required painting of steel piles.

Qualification of welding operators will be required.

Painting: See Special Provisions.

421

ESTIMATED QUANTITIES

ITEM NUMBER	ITEM	UNIT	SUB-STRUCTURE	SUPER-STRUCTURE	TOTAL
1-G	Class 1 Excavation for Structures	Cu.Yd.	1505.		1505

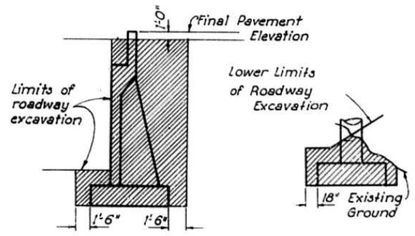
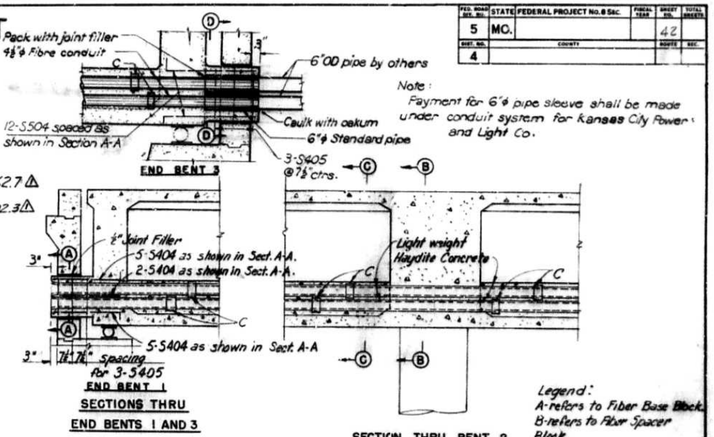
40-W	Conduit System (Lighting)	L.S.			1
40-WW	Conduit System for Kansas City Power and Light Company	L.S.			1

Quantity Notes:
All excavation for bridge will be paid for as Class 1 Excavation for Structures. Sketches below show limits of excavation for pay purposes.

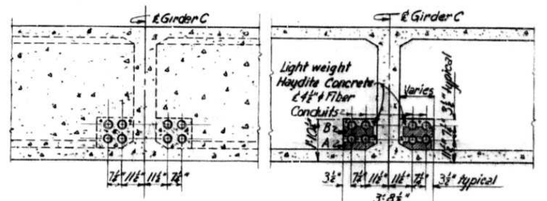


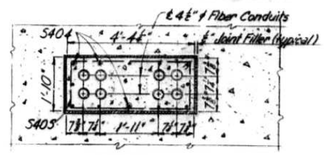
Estimated quantity of Class "B" concrete substructure, includes all concrete in end bents (including wing-walls and parapet) and intermediate bent footings only. All other concrete is included in estimated quantity of Class B-1 concrete superstructure.



Note:
Payment for 6'ϕ pipe sleeve shall be made under conduit system for Kansas City Power and Light Co.

Legend:
A-refers to Fiber Base Block.
B-refers to Fiber Spacer Block.
C-refers to Dust Joints.





Note:
For location of Conduit System see sheet 9.

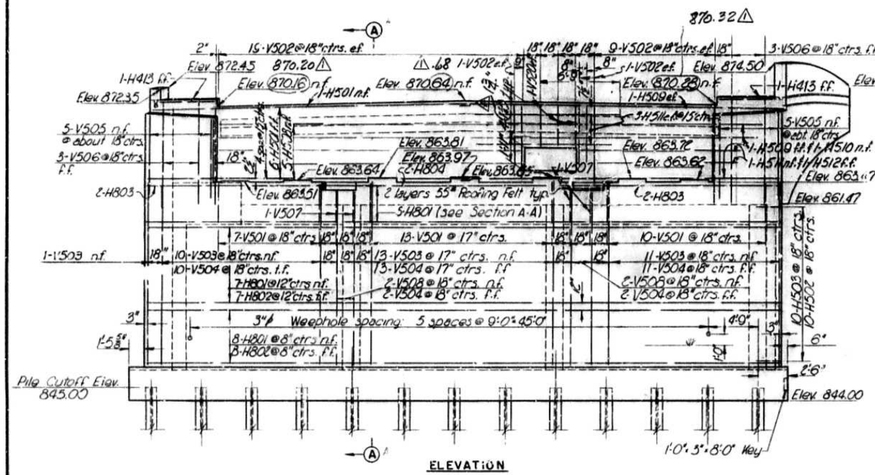
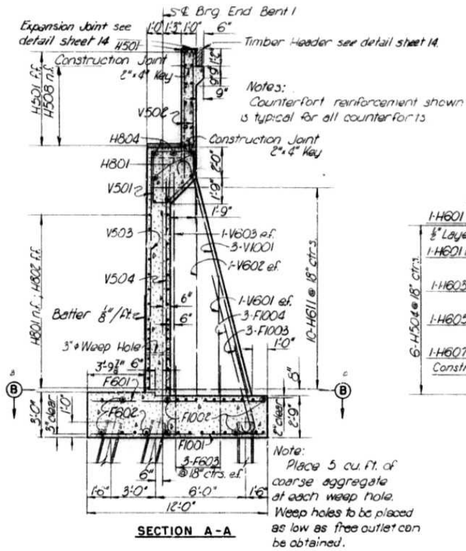
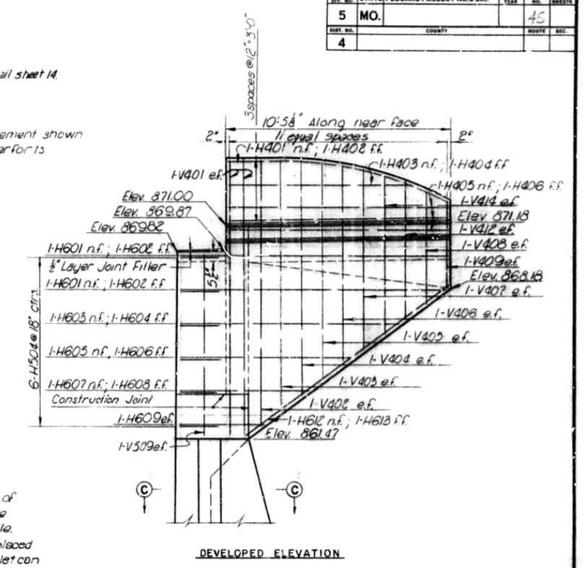
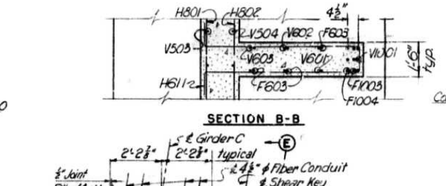
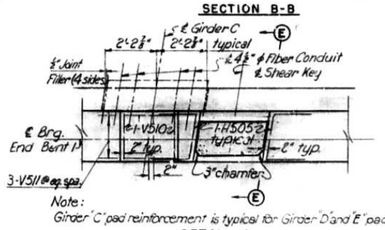
PLAN

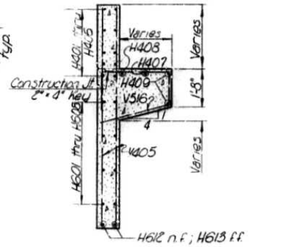


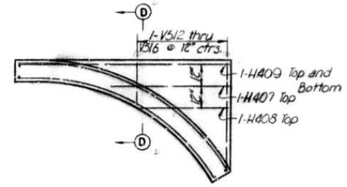


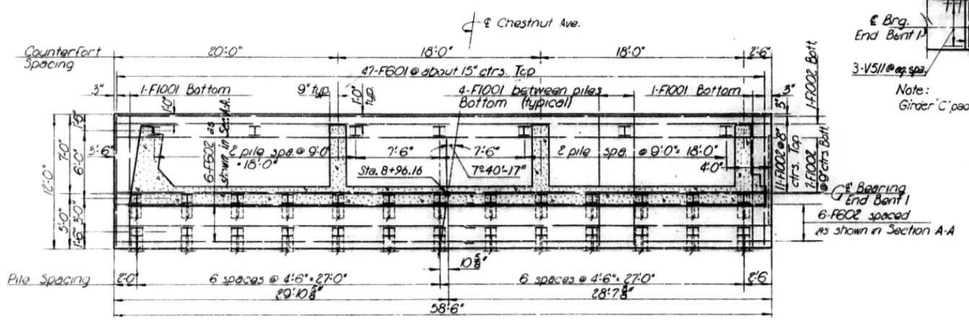


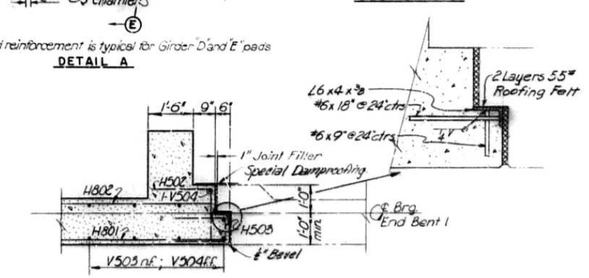












Notes:
1. Piles shall be battered 3"/ft. where shown.
2. All piles are 12 BP 53.
3. Elevations and dimensions shown to surfaces to receive joint filler are to the face of concrete.
4. Unless noted otherwise all reinforcing is 2" clear.
5. For expansion roller details see sheet 14.
6. For rustication detail see sheet 6.
7. For reinforcement schedule see sheet 3.
8. For pile spike detail see sheet 7.
9. Provide 5 Cu. Ft. coarse aggregate at each weep hole.
10. For 4½" ϕ Fiber Conduit System details see sheet 2.
11. For Concrete End Post ordinates see sheet 6.

f. refers to far face.
e. refers to each face.
n. refers to near face.

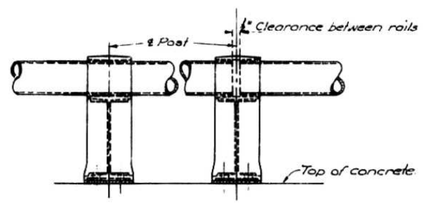
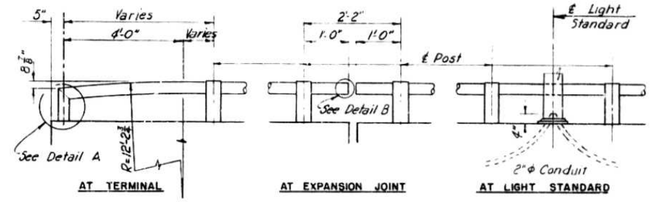
SINGLE TUBE ALUMINUM RAILING

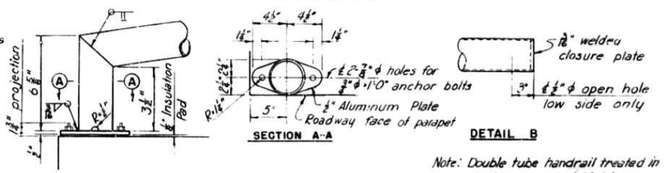


TYPICAL HANDRAIL DETAILS

Note: All handrail posts shall be set normal to grade.
Aluminum tube handrail shall be bent to conform to vertical and horizontal alignment of parapet.
Aluminum washer shims between insulation pad and post base may be used for adjusting handrail alignment. Maximum thickness of shims to be ⅛". Where more fitting of post is required for proper alignment, concrete bearing areas shall be ground down.
All parts of handrail, except anchor bolts, nuts, washers, and set screws are to be of aluminum material.
The contract unit price per linear foot of "Aluminum Alloy Handrail" shall include furnishing and erecting the handrail complete with anchor bolts, shims and insulation pads.
All fillets ½" except as noted.
All draft 3° except as noted.
Rails to be fabricated in two or three panel lengths unless otherwise approved.
Omit set screw on side near filled joint in parapet at expansion posts.

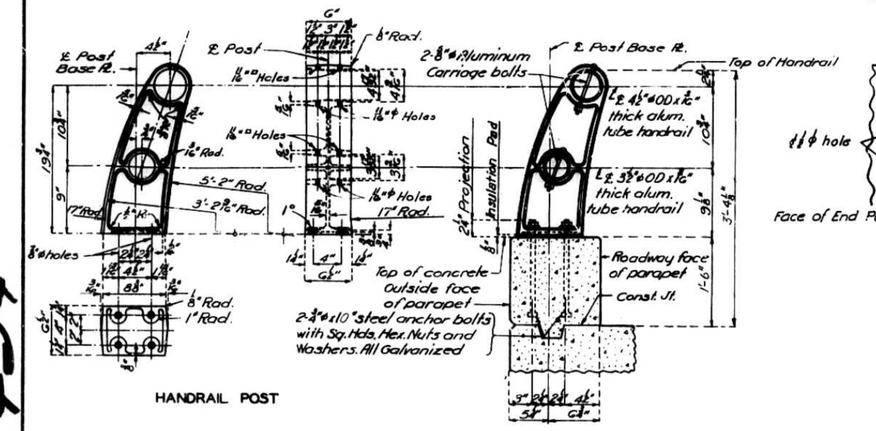


HANDRAIL ELEVATION



Note: Double tube handrail treated in similar manner at Light Standards and Expansion Joints.

HANDRAIL DETAILS



Note: Two tube Alcoa Post No. 2006, Kaiser Post No. 22054 or engraved equiv. using ⅜" stainless steel set screws may be substituted for post shown above requiring ⅝" aluminum carriage bolts.

GENERAL PLAN AND ELEVATION

SHEET 1A OF 2

435

FINAL PLANS

GENERAL NOTES

Design Specifications: AASHO 1957.

Design Loading: H20 15 #/sq. ft. future wearing surface.

Concrete: Concrete Stress: Class "B-1" fc = 1400 psi
Class "B" fc = 1200 psi
Concrete for superstructure was Class "B-1" air entrained. Concrete for substructure was Class "B" air entrained. If the contractor desires, he may use Class "B-1" in lieu of Class "B" for concrete in substructure with payment made on the basis of Class "B" concrete.
All forms were removed from the interior of box girders, except as indicated in Special Provisions for top slab.

Reinforcing Steel: Allowable stress 20,000 psi. All splices in reinforcing steel are 32 bar diameters.
Bar sizes are designated on the plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicate the size of the bar.
Dimensions shown on the plans from reinforcing steel to outside edge of concrete are all clear dimensions.
All bending dimensions are from "out to out" of bars.

Utilities: All utilities, unless shown otherwise, were removed or relocated by others. The contractor did notify the owner of the utilities of his work schedule sufficiently in advance to allow time for the disposition of utilities.

Shipping: Permits were obtained for 71 truck loads over legal length.

Joint Filler: Where joint filler is specified on the plans it did conform with the requirements for gray rubber compound joints as given in Section 59-22B of the Standard Specifications.

Fiber Conduit: Expansion sleeves were required in fiber conduit at all expansion joints. Expansion sleeve were an oversized fiber conduit with rubber ring as provided by the manufacturer.

Piling: All piles did conform with details and notes on Sheet No. 7. All piles required for this structure were furnished by the State. (See Special Provisions). All piles were driven to or into solid rock, boulders, shale or cemented gravel, or to not less than full length authorized, and to sustain a load of at least 64 tons per pile for 14 BP 73 and 46 tons per pile for 12BP53. All piles were driven with a steam hammer. See Section 22-9C of Standard Specifications for required painting of steel piles.

Qualification of welding operators was required.

Painting: See Special Provisions.

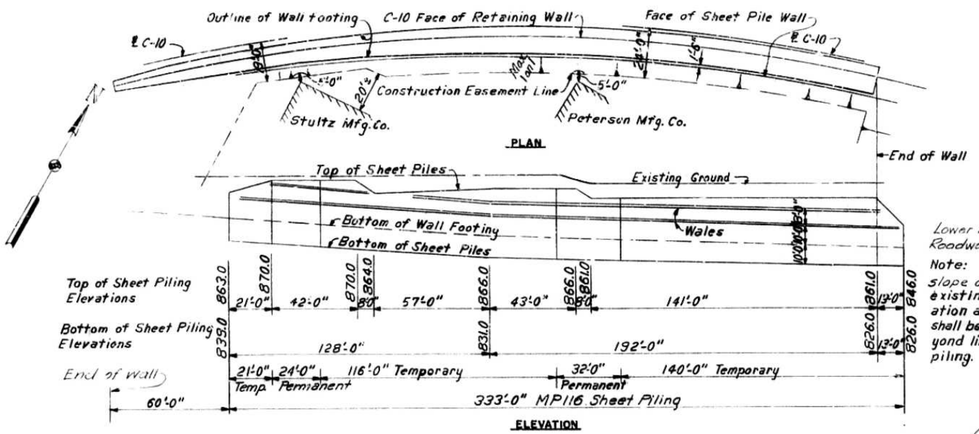
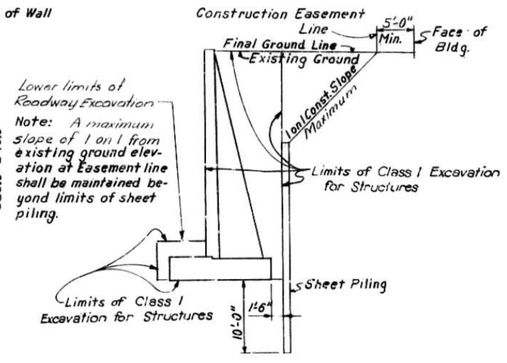
Notes:
All dimensions are given along Ramp C-10 face of wall.
Top of Sheet Pile Elevations shown are minimum elevations.
Permanent Sheet Piles shall be cut-off 2'0" below final grade line.
The contractor shall carry out his construction operation in such a manner as to prevent any displacement of the soil upon which the building is founded and will be held responsible for any damage to the building resulting from his operations.





GENERAL NOTES

Design Specifications: AASHO 1957

Concrete: All concrete to be Class B air-entrained. fc = 1200 p.s.i. (fc = 3000 p.s.i.)

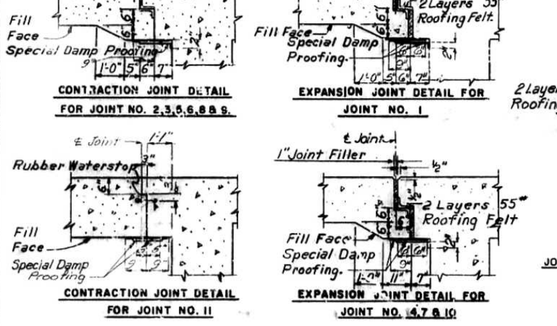
Reinforcing Steel: Allowable Stress 20,000 p.s.i. All splices in reinforcing steel shall be 32 bar diameters.
Bar sizes are designated on the plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicate the size of the bar.
Dimensions shown on the plans from reinforcing steel to outside edge of concrete are all clear dimensions.
All bending dimensions are from "out-to-out" of bars.
Hooks and bends shall be in accordance with the AASHO Manual of Standard Practice for Detailing Reinforced Concrete Highway Structures.

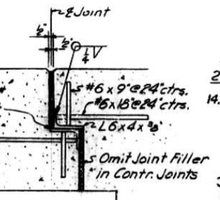
Joint Filler: Where Joint filler is specified on plans it shall conform to the requirements for Grey Rubber Compound as in Section 59-22B of the Standard Specifications.

Piling: All piles (12BP53) shall conform with details and notes on Sheet No. 2. All piles required for this structure will be furnished by the State. (See Special provisions). All piles shall be driven to or into solid rock, boulders, shale or cemented gravel, or to not less than full length authorized, and to sustain a load of at least 47 tons per pile 12BP53. All piles shall be driven with a steam hammer. See Section 22-9C of the Standard Specifications for required painting of steel piles.

Qualification of welding operators will be required.

Rubber Waterstop: Rubber waterstop to be 6" Flat Dumbbell Type as furnished by Servicised Products Corp or an approved equivalent. Field splice shall be vulcanized, made in cemented sleeve sections, or cemented lap joints made with an approved high strength cement.





Note:
Rubber Waterstop to extend from top of footing to 6" below top of retaining wall
Cost of Waterstop to be included in unit price bid for concrete.

Note: Special Dampproofing to extend from top of footing to a point 6" below finished ground line.

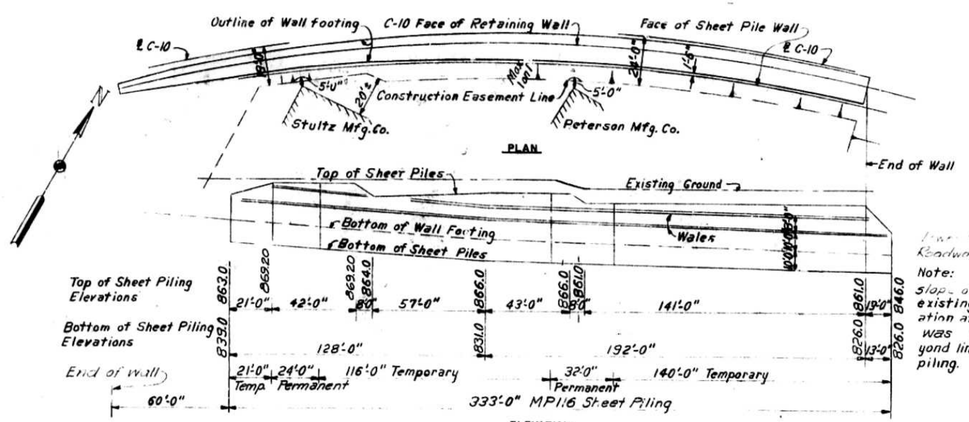
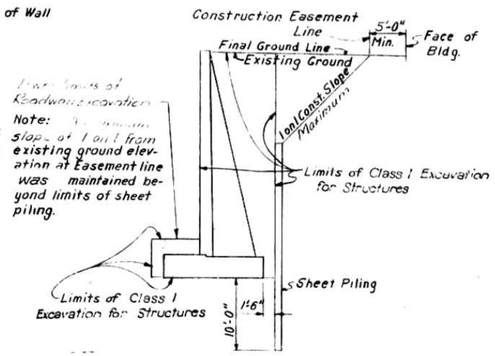
FINAL PLANS

Notes:
All dimensions are given along Ramp C-10 face of wall.
Top of Sheet Pile Elevations shown are minimum elevations.
Permanent Sheet Piles were cut-off 2'0" below final grade line.
The contractor carried out his construction operation in such a manner as to prevent any displacement of the soil upon which the building is founded and was held responsible for any damage to the building resulting from his operations.





GENERAL NOTES

Design Specifications: AASHO 1957

Concrete: All concrete was Class B air-entrained. fc = 1200 p.s.i. (f'c = 3000 p.s.i.)

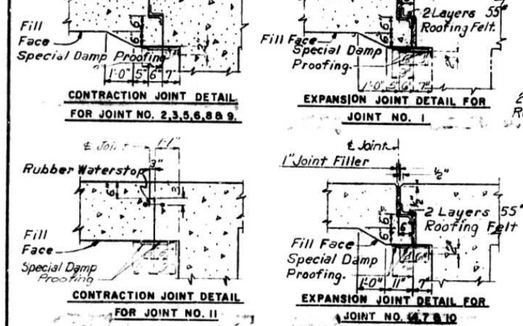
Reinforcing Steel: Allowable Stress 20,000 p.s.i. All splices in reinforcing steel are 32 bar diameters.
Bar sizes are designated on the plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicate the size of the bar.
Dimensions shown on the plans from reinforcing steel to outside edge of concrete are all clear dimensions.
All bending dimensions are from "out-to-out" of bars.
Hooks and bends were in accordance with the AASHO Manual of Standard Practice for Detailing Reinforced Concrete Highway Structures.

Joint Filler: Where Joint filler is specified on plans it did conform to the requirements for Gray Rubber Compound as in Section 59-22B of the Standard Specifications.

Piling: All piles(12BP53) conform with details and notes on Sheet No. 2. All piles required for this structure were furnished by the State. (See Special provisions). All piles were driven to or into solid rock, boulders, shale or cemented gravel, or to not less than full length authorized, and to sustain load of at least 47 tons per pile 12BP53. All piles were driven with a steam hammer. See Section 22-9C of the Standard Specifications for required painting of steel piles.

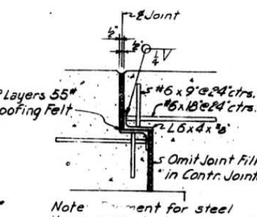
Qualification of welding operators required.

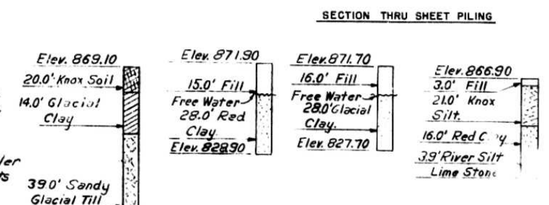
Rubber Waterstop: Rubber waterstop was 6" Flat Dumbbell Type as furnished by Servicised Products Corp. or an approved equivalent. Field splice were vulcanized, made in prefabricated sleeve sections, or connected top joints made with an approved high strength cement.



Note:
Rubber Waterstop extends from top of footing to 6" below top of retaining wall.
Cost of Waterstop was included in unit price bid for concrete.

Note: Special Damp proofing extends from top of footing to a point 6" below finished ground line.





QUANTITIES			
Item No.	Item	Unit	Total
1-G	Class 1 Excavation for Structures	Cu. Yds.	3783.5
16-B	Class B Concrete	Cu. Yds.	1120.8
19-A	Reinforcing Steel	Lbs.	147,320
22-DD	Steel piles in place 12BP53 (State Furn.)	Lin. ft.	4,446
38-A	Steel Sheet Piles (Permanent)	Sq. ft.	1,845
38-A	Steel Sheet Piles (Temporary)	L.S.	1

Note: Estimated quantity of Class 1 Excavation for Structures includes only amount of excavation below limits of Roadway Excavation

GENERAL NOTES

DESIGN SPECIFICATIONS, - AASHO 1957

CONCRETE: All concrete to be Class B air-entrained fc-1200 p.s.i. (fc'-3000 p.s.i.)

REINFORCING STEEL: Allowable Stress 20,000 p.s.i. All splices in reinforcing steel shall be 32 bar diameters.

Bar sizes are designated on the Plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicate the size of the bar.

Dimensions shown on the plans from reinforcing steel to outside edge of concrete are all clear dimensions.

All bending dimensions are from out-to-out of bars. Hooks and bends shall be in accordance with the AASHO Manual of Standard Practice for Detailing Reinforced Concrete Highway Structures.

JOINT FILLER: Where Joint Filler is specified on Plans it shall conform to the requirements for Gray Rubber Compound as in Section 59-22B of the Standard Specifications.

PILING: All piles shall conform to details and notes on this sheet. All piles required for this structure will be furnished by the State (See Special Provisions). All piles shall be driven to or into solid rock, boulder, shale or cemented gravel, or to not less than full length authorized and to sustain a load of at least 47 tons per pile for 12BP53. All piles shall be driven with a steam hammer. See Section 22-9c of Standard Specifications for required painting of steel piles.

ESTIMATED QUANTITIES

ITEM No.	ITEM	UNIT	TOTAL
1-G	Class 1 Excavation	Cu.Yd.	(200) 625
16-B	Class B Concrete	Cu.Yd.	(175.0) 205.0
19-A	Reinforcing Steel	lbs.	(15,660) 15,660
22-DD	Steel Piles in Place (12BP53) Furn.	Lin.Ft.	297
25-D	Concrete Gutter	Lin.Ft.	200
	(Steel Piles in Place (12BP53) Furn.	Lin.Ft.	470)

Note: Estimated quantity of Class 1 Excavation includes only amount of excavation below limits of Roadway Excavation.

NOTE: This drawing is not to scale. Follow dimensions.

GENERAL NOTES

DESIGN SPECIFICATIONS: - AASHO 1957

CONCRETE: All concrete Class B air entrained f'c=1200 p.s.i. (f'c=3000 p.s.i.)

REINFORCING STEEL: Allowable Stress 20,000 p.s.i. All splices in reinforcing steel 32 bar diameters.

Bar Sizes are designated on the Plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicate the size of the bar.

Dimensions shown on the plans from reinforcing steel to outside edge of concrete are all clear dimensions.

All bending dimensions are from out-to-out of bars. Hooks and bends in accordance with the AASHO Manual of Standard Practice for Detailing Reinforced Concrete Highway Structures.

JOINT FILLER: Where Joint Filler is specified on Plans it conform to the requirements for Gray Rubber Compound as in Section 59-22 B of the Standard Specifications.

PILING: All piles conform to details and notes on this sheet. All piles required for this structure furnished by the State (See Special Provisions). All piles driven to or into solid rock, boulder, shale or cemented gravel, or to not less than full length authorized and to sustain a load of at least 47 tons per pile for 12BP53. All piles to be driven with a steam hammer. See Section 22-9c of Standard Specifications for required painting of steel piles.

Qualification of welding operators required.

BORINGS

GENERAL NOTES — FINAL PLANS

DESIGN SPECIFICATIONS, - AASHO 1957

CONCRETE: All concrete is Class B air-entrained f'c = 1200 psi. (f'c = 3000 p.s.i.)

REINFORCING STEEL: Allowable stress 20,000 p.s.i. All splices in reinforcing steel were 32 bar diameters.

Bar sizes are designated on the Plans by numbers. The first digit after the letter in three digit marks and the first two digits after the letter in four digit marks indicate the size of the bar.

Dimensions shown on the plans from reinforcing steel to outside edge of concrete are all clear dimensions.

All bending dimensions are from out to out of bars. Hooks and bends were in accordance with the AASHO Manual of Stanuard Practice for Detailing Reinforced Concrete Highway Structures.

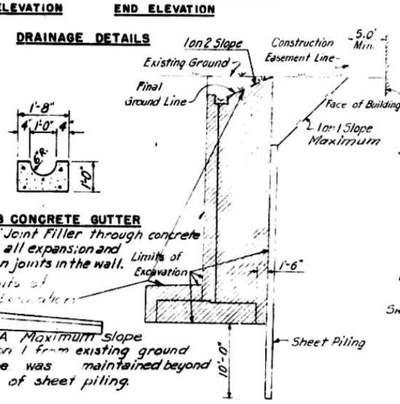
JOINT FILLER: Where Joint Filler is specified on Plans it did conform to the requirements for Gray Rubber Compound as in Section 59-22B of the Standard Specifications.

PILING: All piles (12BP53) conform to details and notes on Sheet No. 3. All piles required for this structure furnished by the State (See Special Provisions). All piles were driven to or into solid rock, boulder, shale or cemented gravel, or to not less than full length authorized and to sustain a load of at least 47 tons per pile for 12BP53. All piles were driven with a steam hammer. See Section 22-9c of Standard Specifications for required painting of steel piles.

Qualification of welding operators was required.

RUBBER WATERSTOP: Rubber waterstop is 6" Flat Dumbbell Type at Joint No. 9 and 6" Hollow Bulb Type at Joint No. 10 as furnished by Servicised Products Corp. or an approved equivalent. Field splice were vulcanized, made in cemented sleeve sections, or cemented lap joints made with an approved high strength cement.

DRAINAGE DETAILS



TYPE B CONCRETE GUTTER

Provide ½" Joint Filler through concrete gutter at all expansion and contraction joints in the wall.

Note: A Maximum slope of 1 on 1 from existing ground at R/W Line was maintained beyond limits of sheet piling.

SECTION THRU SHEET PILING

QUANTITIES

ITEM NO	ITEM	UNIT	TOTAL
1-G	Class 1 Excavation	Cu.Yd.	2891.5
16-B	Class B Concrete	Cu.Yd.	858.5
19-A	Reinforcing Steel	lbs.	111,260
2200	Steel Piles in Place (12BP53) 53 lbs./Lin.	Lin.Ft.	2670
25-D	Concrete Gutter	Lin.Ft.	327
38-A	Sheet Piling, Permanent	Sq. Ft.	3407
38-A	Sheet Piling, Temporary	L.S.	1

Note: Estimated quantity of Class 1 Excavation includes only amount of excavation below Limits of Roadway Excavation.

SHEET PILING NOTES: All dimensions are given along Rdwy. C-10 Face of Wall.

Top of Sheet Piling Elevations shown are Minimum Elevations. Permanent Sheet Piles cut off two feet (2'-0") below Final Grade Line. The Contractor carried out his construction operation in such a manner as to prevent any displacement of the soil upon which the building is founded and was held responsible for any damage to the building resulting from his operation.
